# Experiments on Data Assimilation (at)

# Experiment 0 No Data Assimilation

Forecast Analysis Cycle Period: 20

**深色雙擺**用來呈現Nature Run

**淺色雙擺**用來呈現Model Run

曲線圖呈現 $\theta_1$ 、 $\theta_2$ 的模擬誤差

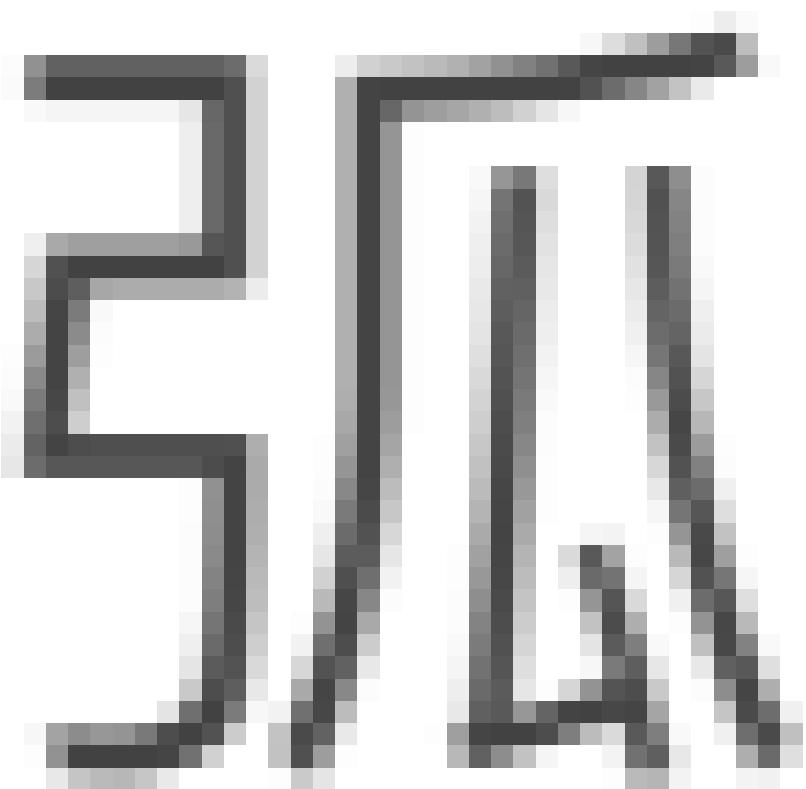

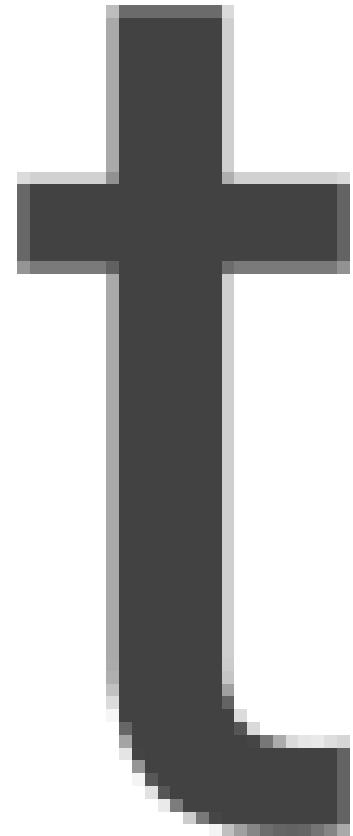

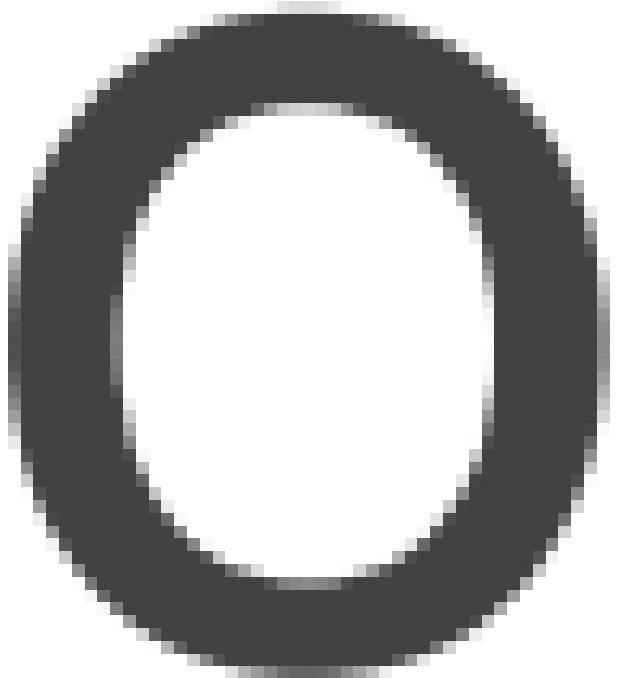

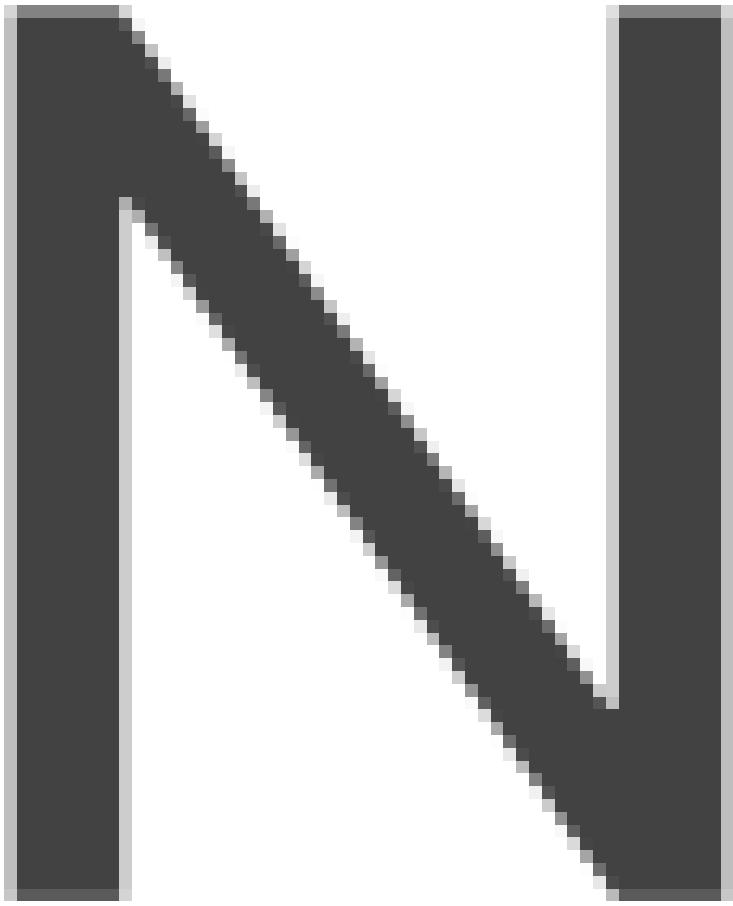

而具有初始狀態鬼火的經驗語彙雙指標為主對初火台狀鬼火有

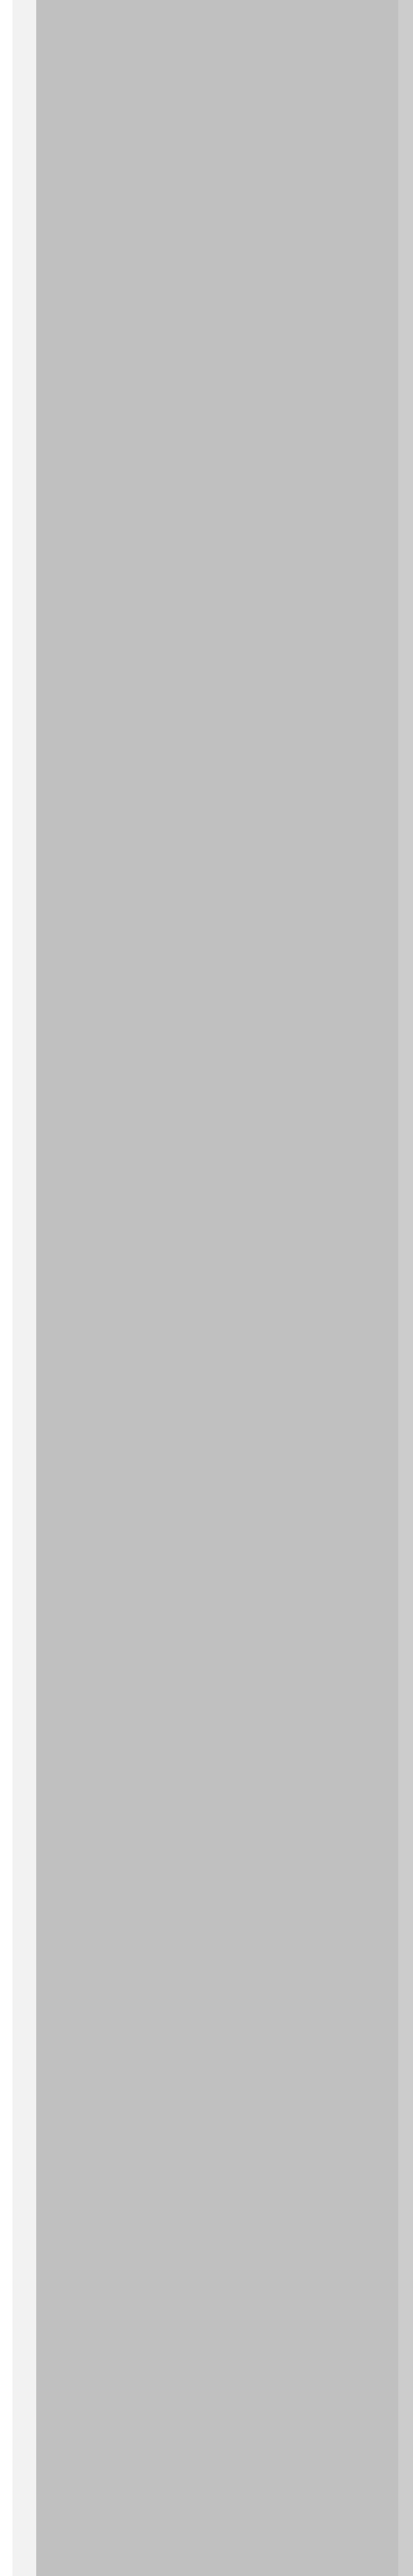

敏感性的混沌物理系統。

實驗提前統計方法的模擬，能為20種後續直值進行有效的模擬，從而達到對主觀指標的準確評定。

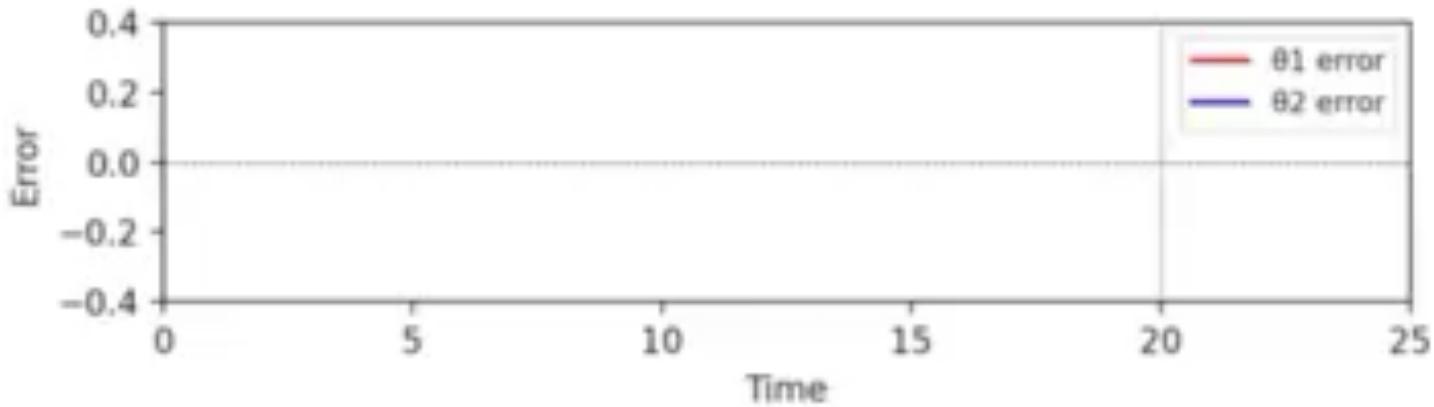

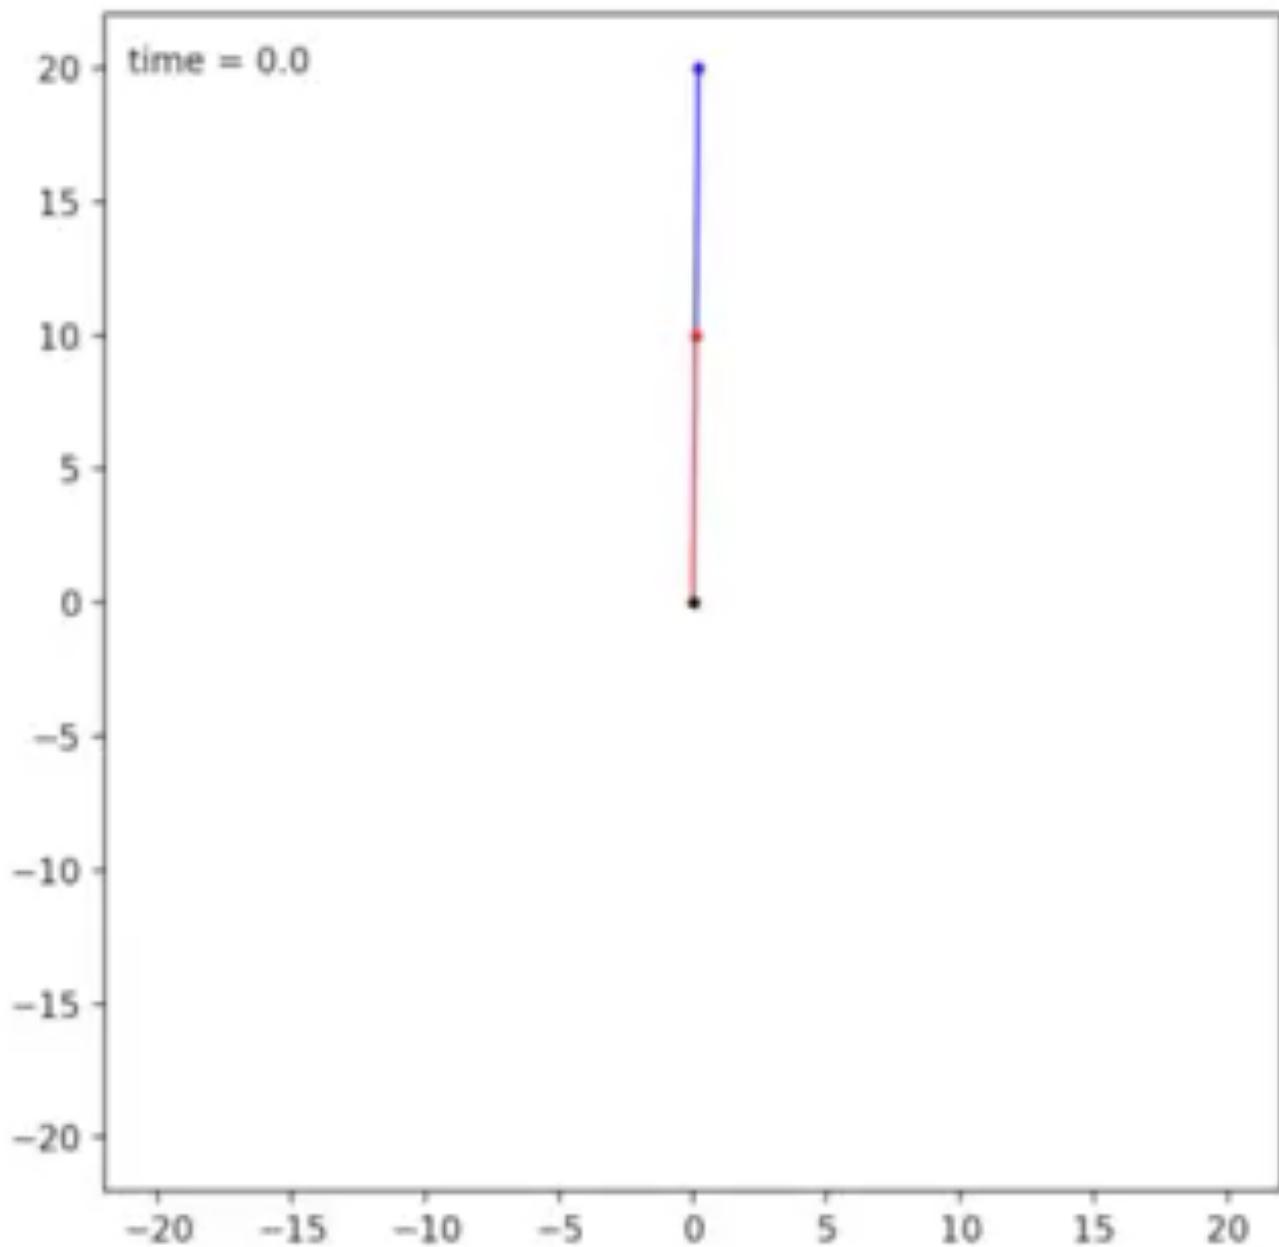

# Experiment 0 No Data Assimilation

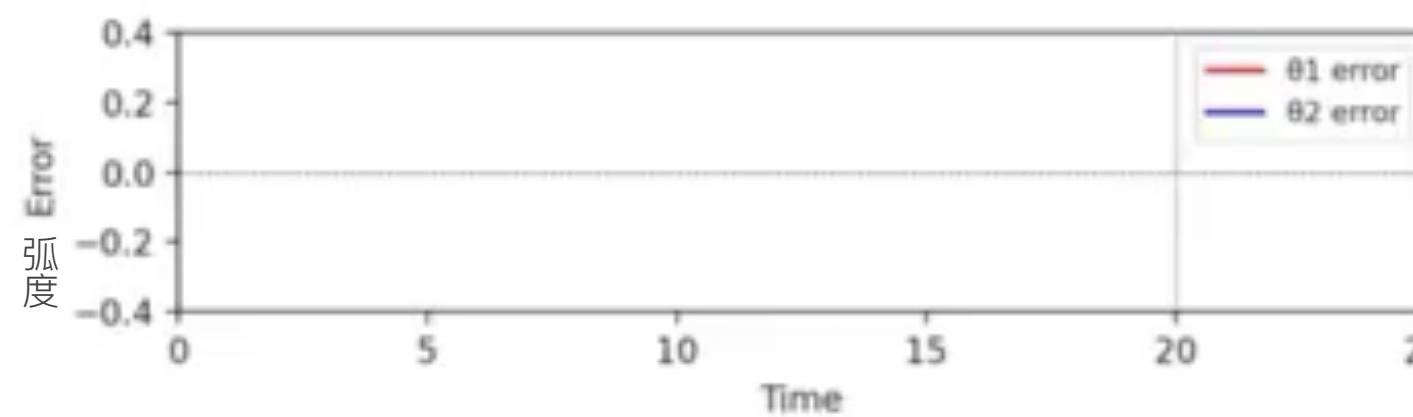

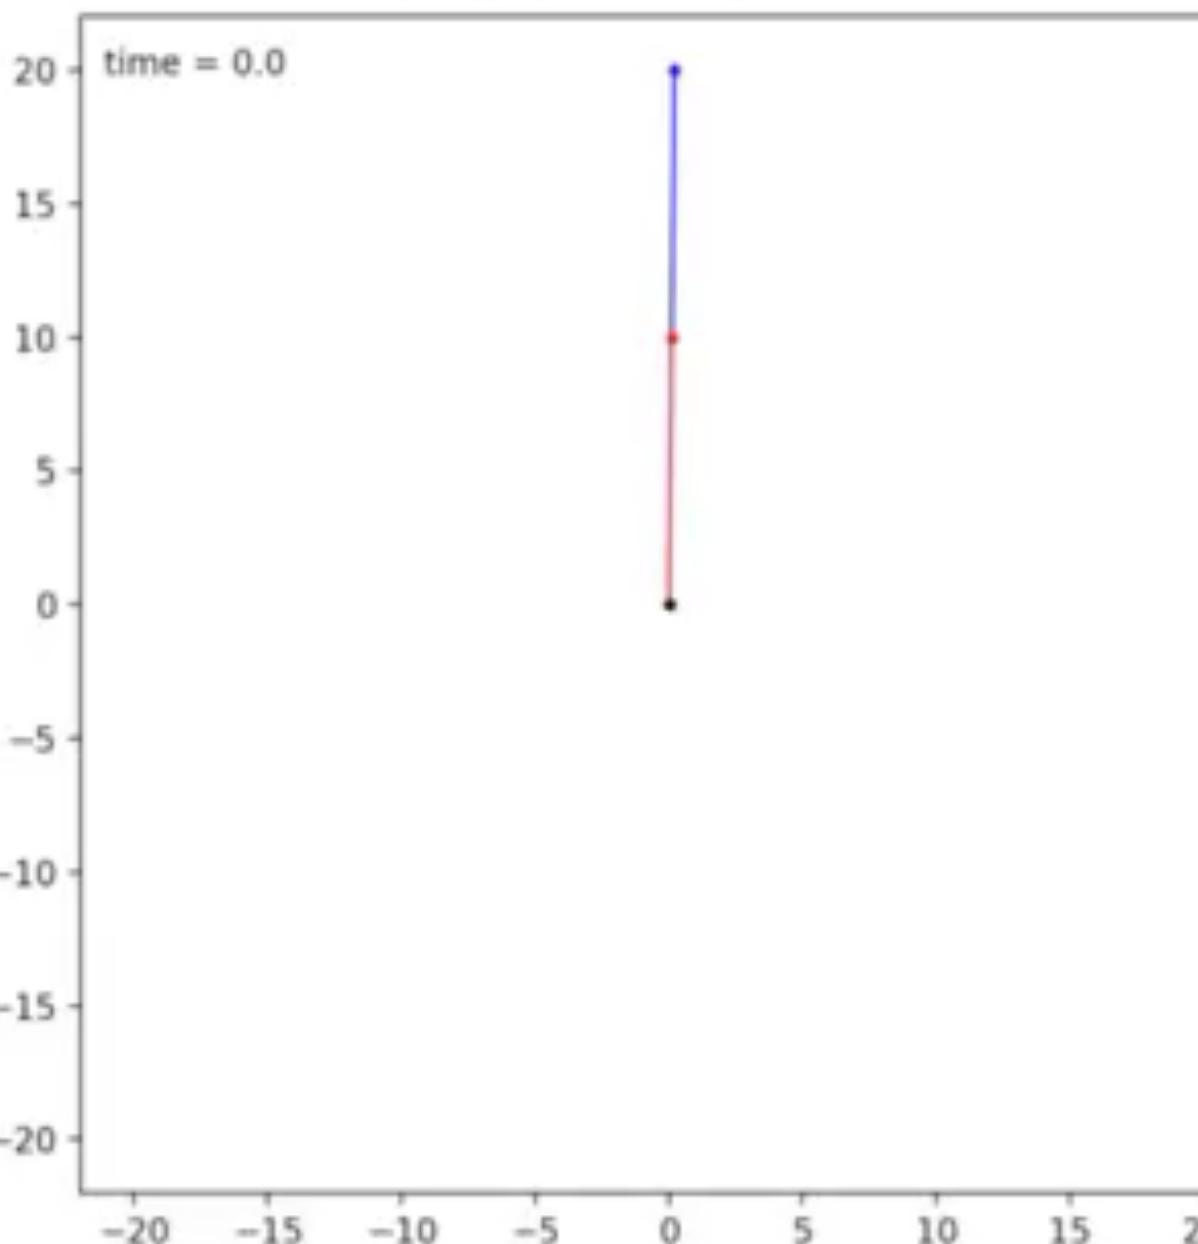

Forecast Analysis Cycle Period: 20

# Experiment

## Experiment 0: No Data Assimilation (不同化)

Experiment 0 No Data Assimilation

註：因20秒後，model run已無法對真值進行有效模擬，實驗提前終止。

### Note

#### 說明

深色雙擺用來呈現Nature Run  
淺色雙擺用來呈現Model Run  
曲線圖呈現 $\theta_1$ 、 $\theta_2$ 的模擬誤差

#### 結論

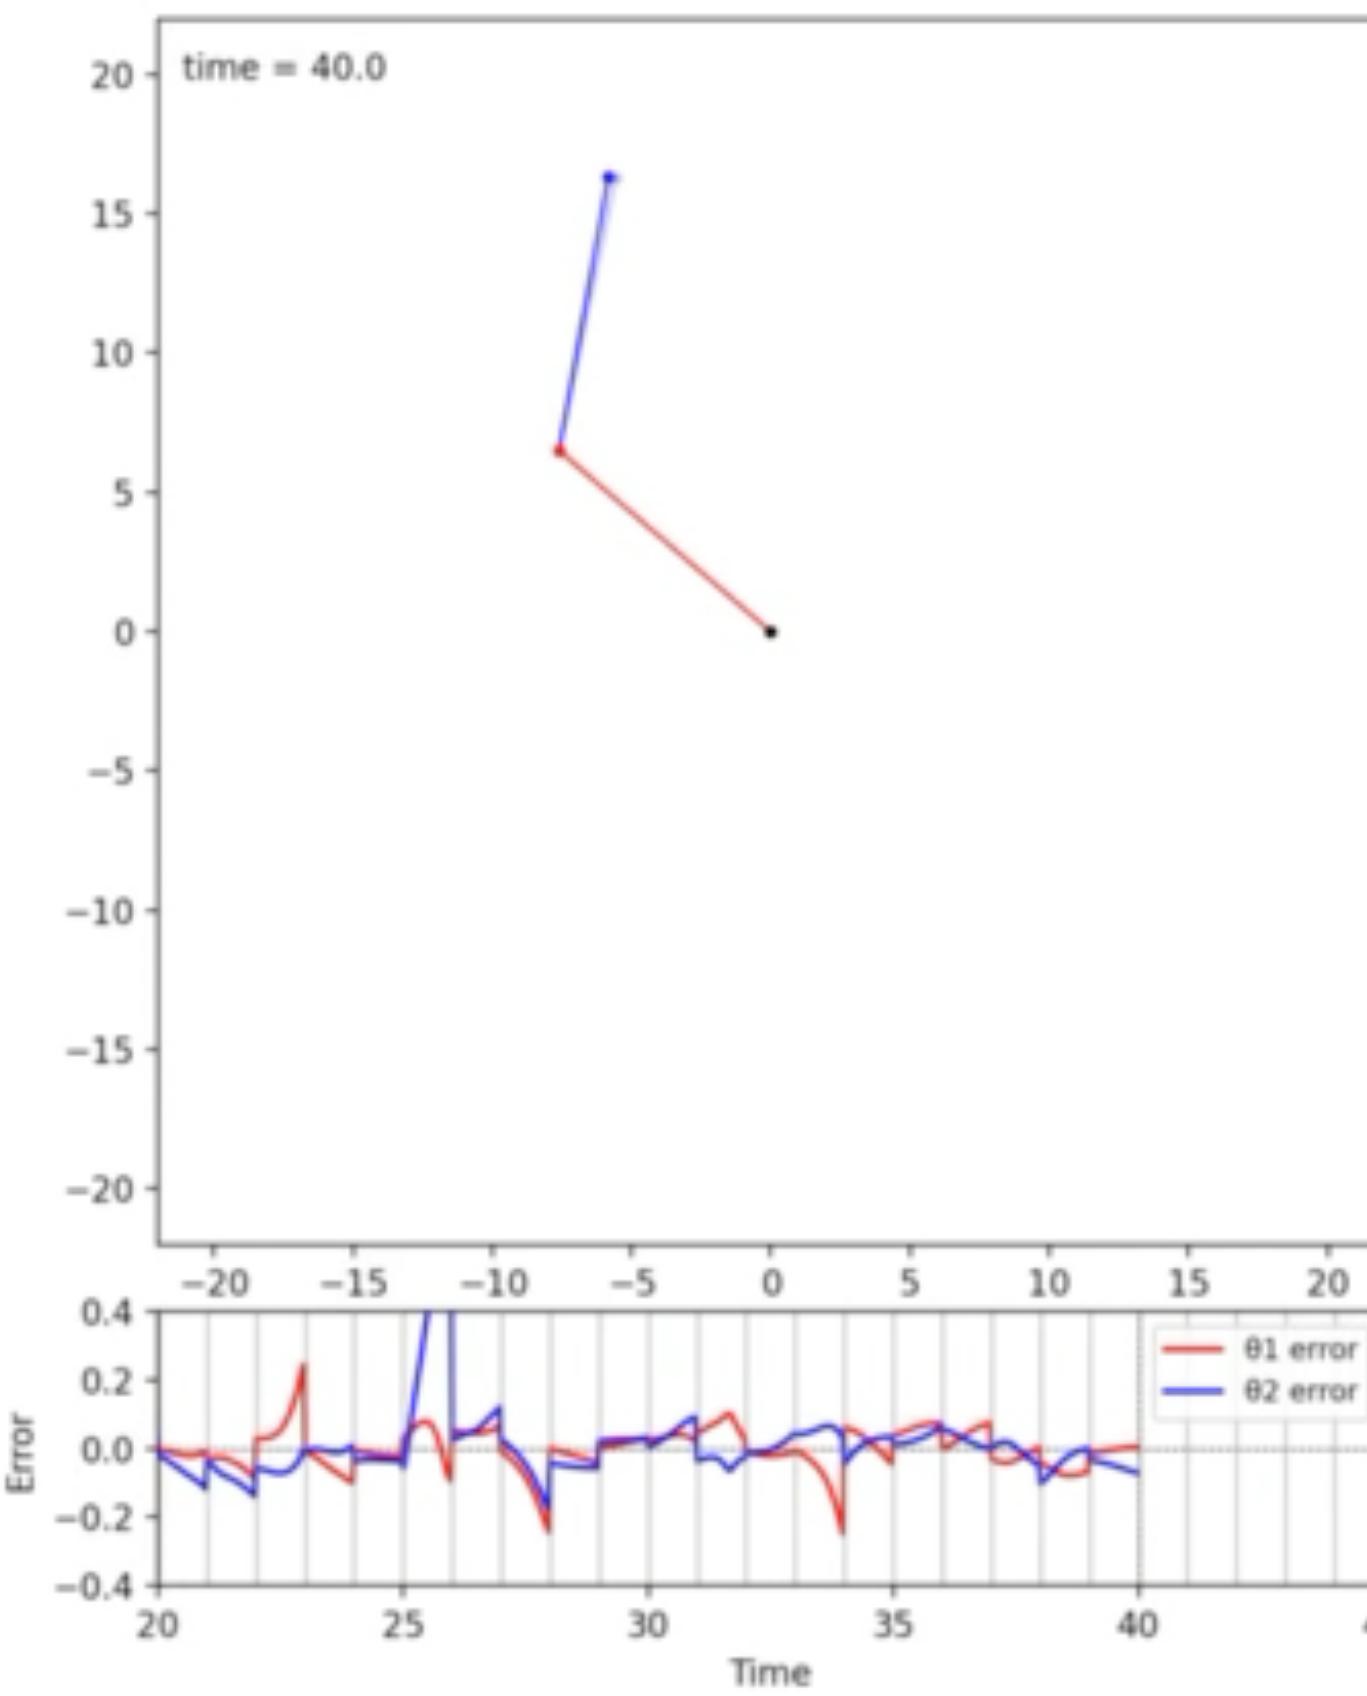

可驗證雙擺為對初始狀態具有  
敏感性的混沌物理系統。

# Experiment

## Experiment 1: Observation is Analysis (每1秒分析一次，分析值即觀測值)

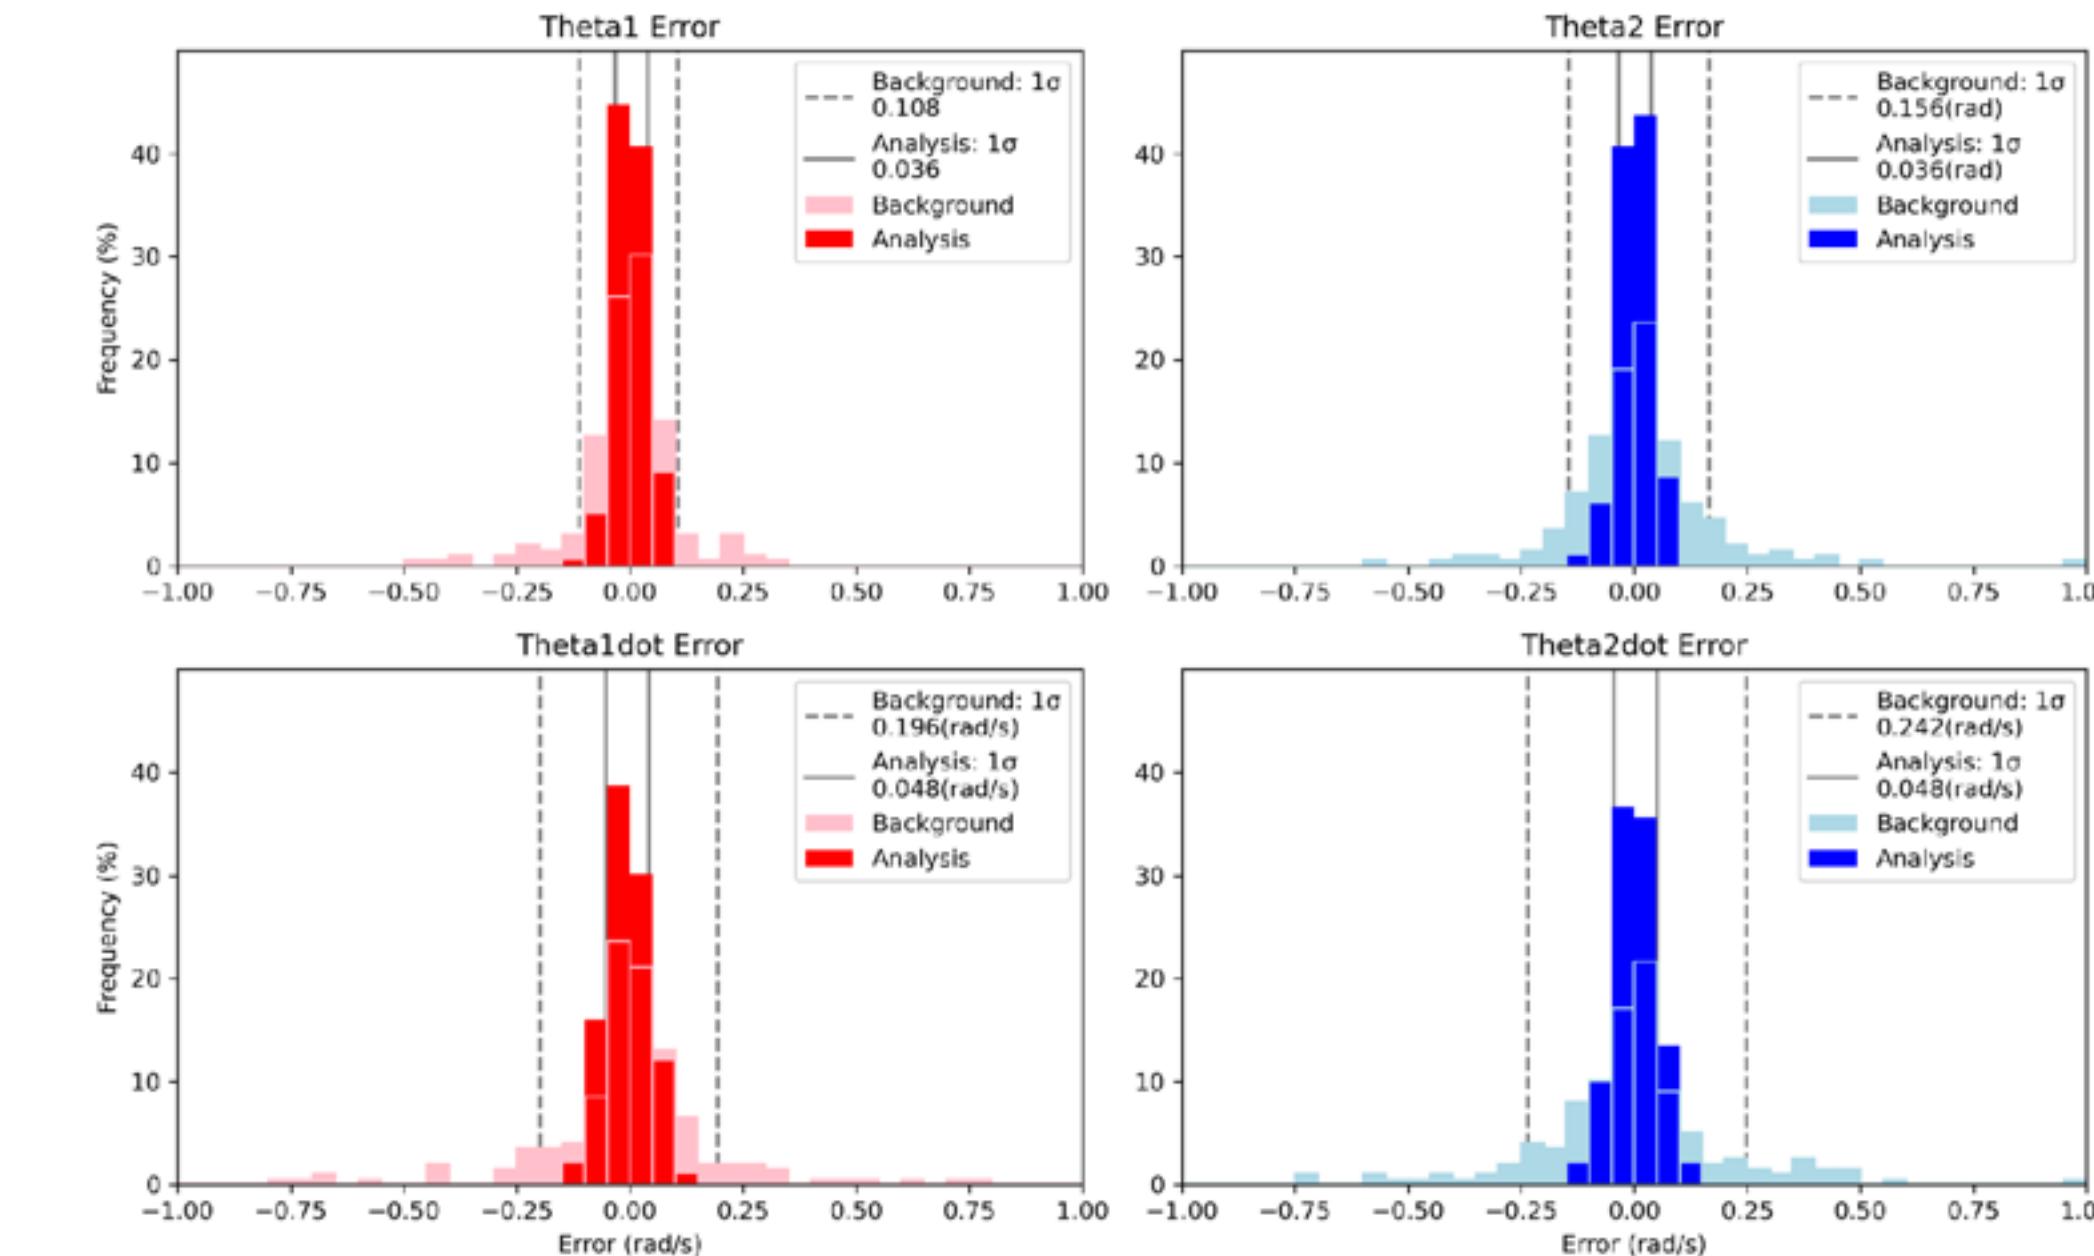

Experiment 1 Observation is Analysis

Forecast Analysis Cycle Period: 1

分析(即觀測)誤差相較於背景誤差改變了多少？

Experiment 1: Analysis vs Background

觀測即分析時

$\theta_1$  分析標準差 : 0.036 (rad)  
 $\dot{\theta}_1$  分析標準差 : 0.048 (rad/s)

$\theta_2$  分析標準差 : 0.036 (rad)  
 $\dot{\theta}_2$  分析標準差 : 0.048 (rad)
